MARINTEC INNOVATION

Turning Sparks of Inspiration into Innovative Maritime Solutions

Following its inaugural edition in 2017 during Marintec China, the Marintec Innovation Conference will be held in December of even-numbered years at the Shanghai Renaissance Zhongshan Park Hotel. Organised by Informa Markets and SSNAME, Marintec Innovation continues to provide a unique platform for fostering interactions on diverse findings and advancements in the maritime industry through collaboration and knowledge sharing.

Marintec Innovation's Themes

2017: Cruise Shipbuilding at Marintec China

2018: International Marine Intelligent Energy Efficiency Technology

2020: The Fourth Industrial Revolution at Sea

2022: Defining the Path to Decarbonisation

2024: Alternative Energy and Fuels Contribute To Low-carbon Maritime

Inspiring Speakers from Diversified backgrounds

Previous speakers from ABB Marine & Ports, ABS, CATL, Clarksons Research, COSCO Shipping, CMA CMG, CSSC Huangpu Wenchong, Danish Maritime Authority, e5 Lab, European Chamber, Inmarsat Maritime, Kongsberg, Maersk, Methanol Institute, Shanghai Waigaoqiao Shipbuilding, UNCTAD, Wartsila Acceleration and more.

We would like to extend an invitation to you to join us at this event to connect with the industry and engage with some of the industry's most prominent personalities. "Innovation is often found where insight is obtained. Many times, this is through forums such as these, which make them always special." stated Michael Duck, Moderator of the first Marintec Innovation Series and Executive Vice President - Commercial Development of Informa Markets.

The Marintec Team is dedicated to supporting our industry in its pursuit of the decarbonisation goal, echoing our theme this year. With this in mind, it is important that we harness the power of technology and foster collaboration to drive an accelerated path to decarbonisation.

More details will be announced soon, please stay tuned for more information.

MARINTEC INNOVATION CONFERENCE 2024

Charging the Future: Focus on Renewable Energy

Over the past decade, advances in technology, scale-up and industrial experience have led to the emergence of several amazing clean energy technologies. Wind, solar, battery, ammonia, methanol, biofuels, nuclear and other renewables sources. These technologies have reached a point where they are, or will soon be, economically competitive with their fossil fuel counterparts.

As the maritime industry actively explores alternative energies and technologies to achieve decarbonisation and meet environmental targets, stakeholder collaboration, regulatory support and technological innovation will drive this transition.

Against this backdrop, the Marintec Innovation Conference, a stimulating two-day conference, will bring together experts from the maritime and energy industries to discuss the alternative energy and fuels and its impact on low carbon shipping. Taking place in **Renaissance Zhongshan Park Hotel, Shanghai on 12-13 December**, the conference will consist of three sessions with networking opportunities.

MARINTEC CHINA – ENERGYTEC 2025

Anchored in Innovation, Fuelled by Purpose

Engerytec, a new extension to explore innovative solutions that bridge the gap between the maritime industry and sustainable energy practices. Running alongside Marintec China, the new extension creates a dynamic platform for knowledge sharing, business growth, and holistic solutions in the maritime and energy sectors.

2-5 December 2025 | Shanghai New International Expo Center

Marintec China attracts industry experts and enthusiasts from around the world who are eager to learn about the latest products and technologies, from shipbuilding and design to digitalisation, sustainability, renewable energy and safety. Don't miss this exciting opportunity to showcase your brand and make a lasting impression on potential clients!

Theme: Alternative Energy and Fuels Contribute To Low-carbon Maritime

Addressing the challenge of the low-carbon shipping means recognising that in many cases it is a matter of revolution, rather than the slow evolution to which shipping has been accustomed in the past. The introduction of alternative energy sources and fuels will be the fundamental path to achieving the decarbonisation goal. Effective collaboration is key to success.

Session I – Review and Outlook

Advancing is a revolution, collaborating is an evolution. Achieving the decarbonisation goal will require a radical rethink on a global scale. This calls for governments, financiers, shipowners, and regulators to collaborate and find innovative ways to shape the renewable energy landscape. Together we can make a difference.

- Alternative Energy Transition Outlook and Maritime Forecast
- Low-Carbon Emission Regulations and the Role of Alternative Energy & Fuels
- Challenge and Opportunity, the Sustainability of Maritime Decarbonisation
- Offshore and Shipping – Opportunities for Nuclear

Session II – Sailing Efficiency (Shipowner's Perspective)

Shipowners recognise that if they do not invest in new clean technologies, clean energy sources and digitalisation, they are going to be left behind. As the energy transition progresses, improving fuel efficiency will become even more crucial. Greater collaboration is the answer, and ship owners are ready to act.

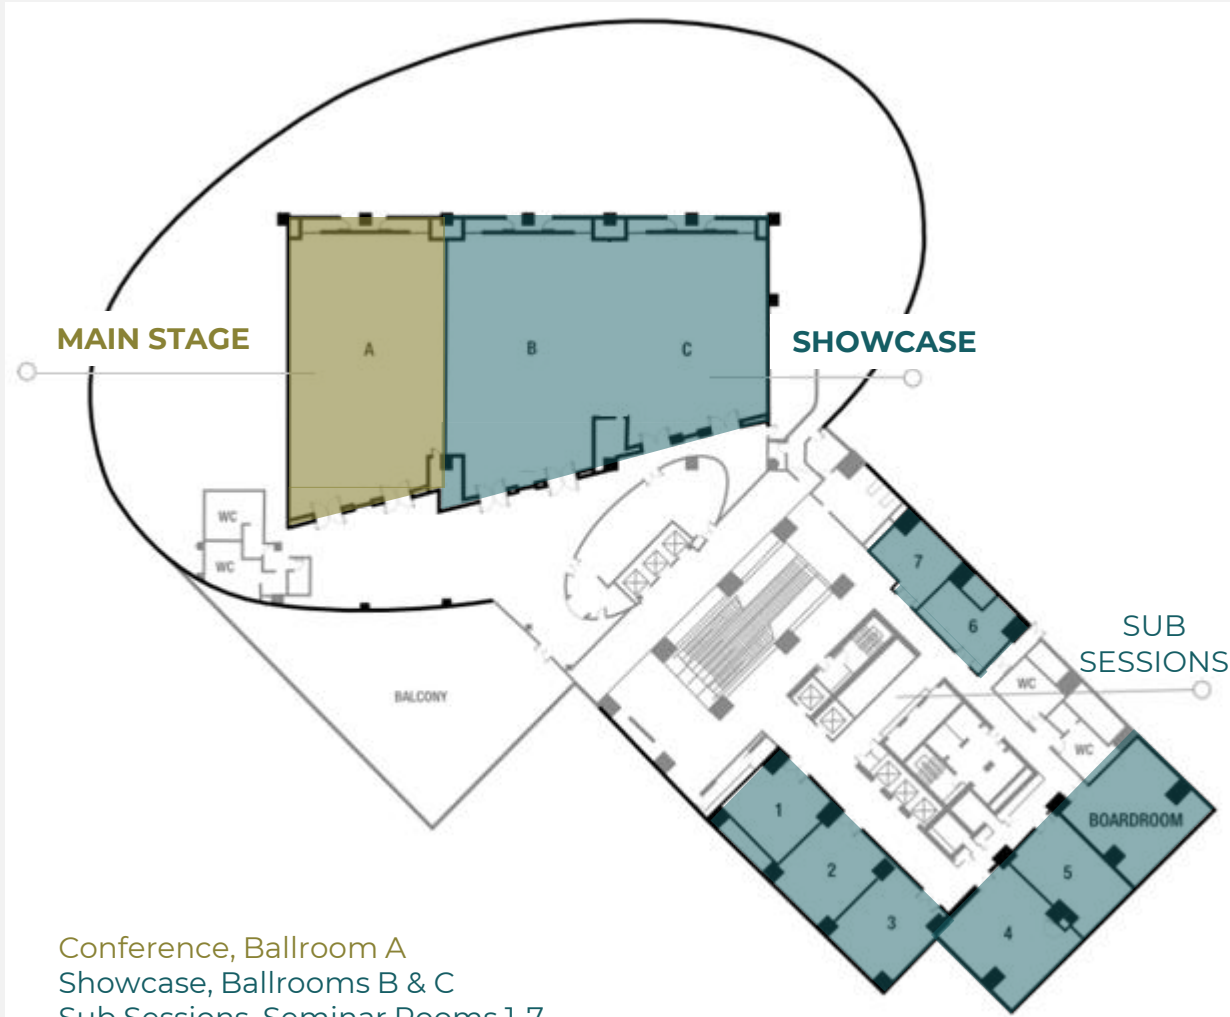

- Maritime Decarbonisation
- New Fuels Green Methanol and Ammonia Fuels
- Nuclear Technology to Support the Maritime Energy Transition

Session III: Industry-Chain Support

The shipping industry is on a path to decarbonisation, with all parties recognising the importance of this endeavour. It encompasses all stakeholders and often supply chains and requires collaboration if significant challenges are to be overcome. These can be met together.

- Production and Sustainable Supply
- Fuel Refuelling and Port Facilities
- Digital Solutions in Maritime Sustainability Transition
- Financing the Green Energy Transition

Conference, Ballroom A
